## **Climatology Versus Pseudoscience: Exposing the Failed Predictions of Global Warming Skeptics: Exposing the Failed Predictions of Global Warming Skeptics** Dana Nuccitelli

This book explains the science of climate change in plain language and shows that the 2 to 4 percent of climate scientists who are skeptical that humans are the main cause of global warming are a fringe minority—and have a well-established history of being wrong.

- Provides a unique, scientifically backed, and easily understood evaluation of the global temperature predictions made by both climate change skeptics and mainstream climate scientists
- Presents readers with a plethora of concrete, verifiable evidence for the author's claims—information that holds the skeptics and deniers accountable for their history of being wrong regarding their assertions
- Discusses possible solutions to climate change, such as carbon emissions pricing—a concept that has gained bipartisan support among economists
