## **Engineering the Human Germline: An Exploration of the Science and Ethics of Altering the Genes We Pass to Our Children**

This book explores the many prospects, challenges and ethical questions that surround the engineering of our reproductive cells. It is an accessible, three-part examination, moving from focused, realistic assessments of the promise and problems for this advancing technology to a section of short essays on the implications of our technological ability. Also included is a panel discussion in which leading scientists, ethicists, and public policy workers give voice to their thoughts and concerns regarding our impending genetic technologies. Many world leaders in these fields, including Leroy Hood, French Anderson, Mario Capecchi, Daniel Koshland, Michael Rose, Lee Silver, and James Watson, have contributed to this volume, providing the essential elements of the debate over germline engineering. If you have ever pondered the question: "Would I be willing to genetically alter my own child-to-be, given a safe, reliable technology, offering a tempting possibility?", this book will be an indispensable guide.
