The Geometry of Information Retrieval

C. J. van Rijsbergen

The Geometry of Information Retrieval C. J. van Rijsbergen

Information retrieval, IR, the science of extracting information from any potential source, can be viewed in a number of ways: logical, probabilistic and vector space models are some of the most important. In this book, the author, one of the leading researchers in the area, shows how these views can be reforged in the same framework used to formulate the general principles of quantum mechanics. All the usual quantum-mechanical notions have their IR-theoretic analogues, and the standard results can be applied to address problems in IR, such as pseudo-relevance feedback, relevance feedback and ostensive retrieval. The relation with quantum computing is also examined. To keep the book self-contained appendices with background material on physics and mathematics are included. Each chapter ends with bibliographic remarks that point to further reading. This is an important, ground-breaking book, with much new material, for all those working in IR, AI and natural language processing.

From reader reviews:

Kathleen Edwards:

Now a day people that Living in the era where everything reachable by match the internet and the resources within it can be true or not demand people to be aware of each information they get. How people have to be smart in receiving any information nowadays? Of course the correct answer is reading a book. Examining a book can help men and women out of this uncertainty Information specially this The Geometry of Information Retrieval book because this book offers you rich details and knowledge. Of course the details in this book hundred pct guarantees there is no doubt in it everbody knows.

Viola Waters:

People live in this new morning of lifestyle always make an effort to and must have the free time or they will get great deal of stress from both daily life and work. So , once we ask do people have spare time, we will say absolutely yes. People is human not really a huge robot. Then we inquire again, what kind of activity have you got when the spare time coming to a person of course your answer may unlimited right. Then ever try this one, reading publications. It can be your alternative within spending your spare time, typically the book you have read is usually The Geometry of Information Retrieval.

Victor Brown:

In this time globalization it is important to someone to acquire information. The information will make anyone to understand the condition of the world. The fitness of the world makes the information much easier to share. You can find a lot of references to get information example: internet, newspapers, book, and soon. You will observe that now, a lot of publisher in which print many kinds of book. The particular book that recommended to your account is The Geometry of Information Retrieval this e-book consist a lot of the information on the condition of this world now. This specific book was represented so why is the world has grown up. The terminology styles that writer value to explain it is easy to understand. Often the writer made some analysis when he makes this book. Here is why this book acceptable all of you.

Ann Conley:

A number of people said that they feel bored stiff when they reading a publication. They are directly felt this when they get a half portions of the book. You can choose the book The Geometry of Information Retrieval to make your own reading is interesting. Your personal skill of reading expertise is developing when you like reading. Try to choose very simple book to make you enjoy to learn it and mingle the impression about book and reading through especially. It is to be very first opinion for you to like to wide open a book and study it. Beside that the publication The Geometry of Information Retrieval can to be your friend when you're feel alone and confuse with what must you're doing of this time.
