Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

Going beyond performing simple analyses, researchers involved in the highly dynamic field of computational intelligent data analysis design algorithms that solve increasingly complex data problems in changing environments, including economic, environmental, and social data. **Computational Intelligent Data Analysis for Sustainable Development** presents novel methodologies for automatically processing these types of data to support rational decision making for sustainable development. Through numerous case studies and applications, it illustrates important data analysis methods, including mathematical optimization, machine learning, signal processing, and temporal and spatial analysis, for quantifying and describing sustainable development problems.

With a focus on integrated sustainability analysis, the book presents a large-scale quadratic programming algorithm to expand high-resolution input-output tables from the national scale to the multinational scale to measure the carbon footprint of the entire trade supply chain. It also quantifies the error or dispersion between different reclassification and aggregation schemas, revealing that aggregation errors have a high concentration over specific regions and sectors.

The book summarizes the latest contributions of the data analysis community to climate change research. A profuse amount of climate data of various types is available, providing a rich and fertile playground for future data mining and machine learning research. The book also pays special attention to several critical challenges in the science of climate extremes that are not handled by the current generation of climate models. It discusses potential conceptual and methodological directions to build a close integration between physical understanding, or physics-based modeling, and data-driven insights.

The book then covers the conservation of species and ecologically valuable land. A case study on the Pennsylvania Dirt and Gravel Roads Program demonstrates that multiple-objective linear programming is a more versatile and efficient approach than the widely used benefit targeting selection process.

Moving on to renewable energy and the need for smart grids, the book explores how the ongoing transformation to a sustainable energy system of renewable sources leads to a paradigm shift from demand-driven generation to generation-driven demand. It shows how to maximize renewable energy as electricity by building a supergrid or mixing renewable sources with demand management and storage. It also presents intelligent data analysis for real-time detection of disruptive events from power system frequency data collected using an existing Internet-based frequency monitoring network as well as evaluates a set of computationally intelligent techniques for long-term wind resource assessment.

In addition, the book gives an example of how temporal and spatial data analysis tools are used to gather knowledge about behavioral data and address important social problems such as criminal offenses. It also applies constraint logic programming to a planning problem: the environmental and social impact assessment of the regional energy plan of the Emilia-Romagna region of Italy.

Sustainable development problems, such as global warming, resource shortages, global species loss, and pollution, push researchers to create powerful data analysis approaches that analysts can then use to gain insight into these issues to support rational decision making. This volume shows both the data analysis and sustainable development communities how to use intelligent data analysis tools to address practical problems and encourages researchers to develop better methods.

From reader reviews:

Karla Walker:

Inside other case, little persons like to read book Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series). You can choose the best book if you appreciate reading a book. As long as we know about how is important some sort of book Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series). You can add know-how and of course you can around the world with a book. Absolutely right, since from book you can know everything! From your country till foreign or abroad you will find yourself known. About simple matter until wonderful thing you are able to know that. In this era, you can open a book or maybe searching by internet unit. It is called e-book. You can use it when you feel fed up to go to the library. Let's read.

Dennis Bryant:

Nowadays reading books become more and more than want or need but also be a life style. This reading addiction give you lot of advantages. Associate programs you got of course the knowledge the actual information inside the book this improve your knowledge and information. The knowledge you get based on what kind of publication you read, if you want send more knowledge just go with schooling books but if you want truly feel happy read one together with theme for entertaining for example comic or novel. Typically the Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) is kind of book which is giving the reader unforeseen experience.

Molly Wilson:

On this era which is the greater man or who has ability in doing something more are more valuable than other. Do you want to become one among it? It is just simple solution to have that. What you have to do is just spending your time not very much but quite enough to possess a look at some books. One of many books in the top listing in your reading list is actually Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series). This book that is certainly qualified as The Hungry Hills can get you closer in becoming precious person. By looking up and review this book you can get many advantages.

Jennifer Pittman:

As we know that book is significant thing to add our understanding for everything. By a book we can know everything we want. A book is a pair of written, printed, illustrated as well as blank sheet. Every year has been exactly added. This book Computational Intelligent Data Analysis for Sustainable Development (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) was filled with regards to science. Spend your extra time to add your knowledge about your research competence. Some people has distinct feel when they reading a book. If you know how big good thing about a book, you can sense enjoy to read a e-

book. In the modern era like right now, many ways to get book which you wanted.
